Summary

Academic career: Marco Guarnieri is an Assistant Research Professor at IMDEA Software (Spain), which he joined as a postdoctoral researcher in July 2018. Before that, he worked as a postdoctoral researcher at ETH Zurich (Switzerland), where he also completed a PhD in the Information Security group.

Research summary: Marco Guarnieri's research focuses on developing tools and techniques for designing practical and secure systems that provide precise, certified security guarantees. Recently, he focused on developing foundations and tools for (1) reasoning about the microarchitectural information flows that are at the root of microarchitectural attacks, (2) precisely characterizing the security of existing countermeasure proposals, and (3) helping hardware and software designers in designing countermeasures that provide precise security guarantees.

Awards: Marco Guarnieri received a best paper award at the IEEE Symposium on Security and Privacy 2021 and an Intel 2021 Outstanding Researcher award for his research on formal models for microarchitectural attacks. He received a Ramon y Cajal, a Juan de la Cierva, and a TALENTO fellowships. He has been a PI in two projects funded by Intel that focused on formal methods for reasoning about microarchitectural leaks in hardware and software.

Scientific service (selection): Marco Guarnieri has served/is serving on the program committee of top-tier security venues like the IEEE Symposium on Security and Privacy (S&P 2022), the ACM Conference on Computer and Communication Security (CCS 2021), the Usenix Security Symposium (SEC 2023), the IEEE Computer Security Foundations Symposium (CSF 2020, 2022-2023), and the IEEE European Symposium on Security and Privacy (EuroS&P 2020-2022). He also served as program chair for the Workshop on Principles of Secure Compilation (PriSC 2022-2023) and the Workshop on Programming Languages and Analysis for Security (PLAS 2021), and he is part of the steering committee of both events. He is the initiator and one of the co-organizers of the Dagstuhl seminar on *Microarchitectural attacks and defenses*.
